

Introducing the EVGA X570 FTW WIFI

- Tuesday, November 9, 2021 □

The EVGA X570 FTW WIFI is a motherboard built upon the AMD X570 chipset to provide everything you need while giving you the performance you demand. Designed and engineered from scratch with a 15-phase digital VRM design, this is one sleek-looking motherboard jam-packed with the latest features and EVGA GUI BIOS. Paired with an AMD Ryzen™ 5000 Series processor, this board is PCIe Gen4-ready with a data transfer rate of up to 16 GT/s to support the latest graphics cards and M.2 NVMe SSDs, scorching-fast 4600MHz+(OC) memory, HDMI/DisplayPort outputs, lots of USB and SATA 6Gb/s ports, and RGB/ARGB options. The EVGA X570 FTW WIFI gives you the freedom to choose your EVGA motherboard without sacrifice or compromise.

1. 15-Phase Digital VRM4. PCIe 4.0 x16 (x16/x8, x8)7. 4x DDR4 DIMMs2. AM4 CPU Socket5. 2x ARGB / 2x RGB Headers8. Pump Header3. PCIe Gen 4.0 M.2 Key-M Slots6. USB BIOS Update Port

Extraordinary Performance by Ryzen™ Processors

About EVGA

Founded in 1999, EVGA has grown exponentially in the channel, serving the system builder, distribution and retail markets with products that offer the highest in quality and customer satisfaction, thereby making the computing experience transparent to the hardware in the box. EVGA only offers visual processing products based on NVIDIA chipsets and in year 2005 expanded its product line to include motherboards.
